SALE TRANSACTIONS

This section describes the steps necessary to complete a Credit or Debit card sale. Please note that if additional transaction prompts are enabled they will present themselves in the flow of the transaction, for example: If Clerk ID is enabled then you will also be prompted to enter the Clerk ID during the transaction. Sale transactions demonstrated in this section are the following:

- EMV Credit Sale
- Credit Swiped
- Credit Manual Entry
- Credit AVS
- Credit with Card Code
- Debit Sale
- Cash Sale
- Multi-Merchant Sale

When Signature Capture is enabled you will be prompted to request a signature on the screen.

CREDIT CARD SALE: EMV CHIP CARD (SIGNATURE)

Use the chart below to process a credit card sale when the credit card is inserted at the point of sale.

STEP	ACTION	TOUCH SCREEN DISPLAY
1	Press the CREDIT icon on your terminal home screen. A new screen will appear with the following options: SALE, RETURN, VOID, AUTH, TICKET and BALANCE . <i>See diagram></i>	
2	Press SALE icon to reach SALE entry screen. <i>See diagram></i>	
3	Enter the SALE amount and press OK . <i>See diagram></i>	
4	A prompt will appear asking your customer to tap, insert, swipe or enter their card number manually. Tap (contactless only) or insert chip card. <i>See diagram></i>

CREDIT CARD SALE: AVS & CARD CODE (CVV, CVC, CID)

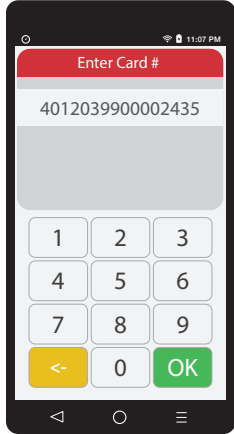

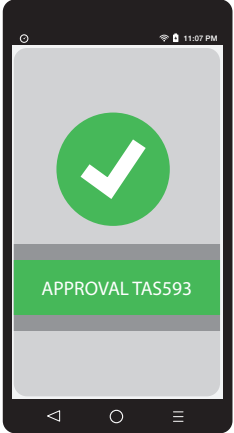

-  Use the chart below to process a credit sale when AVS options have been enabled. The following instructions depict AVS settings of Manual Entry when Card is NOT Present. Please note that AVS prompts during a transaction will vary depending on individual configuration. To learn more about setting AVS options and configurations, [see page 153](#).
-  It is recommended you check with your merchant bank prior to changing AVS settings in your terminal.
-  When the Card Code option is enabled the terminal will prompt during the transaction for the three digit code on the back of the card or the four digit code on the front of the card for American Express & Discover cards. Please note Card Code needs to be enabled in the Set Up Menu for Credit/Debit. To learn more about Card Code options and configurations, see page 150.
- 
 - Swiping VISA prompts for a CVV2 code, 3 digits found on the back of the card.
 - Swiping MasterCard prompts for CVC2 code, 3 digits found on the back of the card.
 - Amex & Discover prompts for CID code, 4 digits found on front of the card.

STEP	ACTION	TOUCH SCREEN DISPLAY
1	Press the CREDIT icon on your terminal home screen. A new screen will appear with the following options: SALE, RETURN, VOID, AUTH, TICKET and BALANCE . <i>See diagram ></i>	 
2	Press SALE icon to reach SALE entry screen. <i>See diagram ></i>	
3	Enter the SALE amount and press OK . <i>See diagram ></i>

TICKET ONLY SALE

This transaction is used when an Authorization Number has already been obtained via Authorize only transaction or through voice authorization.

EXAMPLE: To rent a canoe at Lake Cawanna there is a \$75.00 deposit at the time of the rental. The merchant processes an Auth Only transaction for the \$75.00, receiving an authorization code for the funds but not actually charging the credit card. The merchant charges the credit card when the canoe is brought back by processing a TICKET ONLY sale using the authorization number he/she previously obtained.

STEP	ACTION	TOUCH SCREEN DISPLAY
1	Press the CREDIT icon on your terminal home screen. A new screen will appear with the following options: SALE, RETURN, VOID, AUTH, TICKET and BALANCE. <i>See diagram ></i>	 
2	Press TICKET icon to reach TICKET entry screen. If prompted, input MANAGER PASSWORD (default password is 1234). <i>See diagram ></i>	 
3	Enter the TICKET amount and press OK . <i>See diagram ></i>	
4	If prompted, input MANAGER PASSWORD (default password is 1234).	

TRANSACTIONS

TRANSACTIONS

RETAIL WITH TIP TRANSACTIONS

Retail with tip transactions are designed for those merchants that accept gratuity but are assigned retail MCC codes. For example: Taxi, Car Service, Salon, Maintenance, etc. It is required for retail transactions with tip that both the transaction amount and the tip amount are authorized as one amount during the original sale, unlike the pre-auth and post-auth of a restaurant tip transaction. Retail tips cannot be added at a later time.

To accomplish this we use a process that includes a PRESALE TICKET, which has only sale amount information on it. The presale ticket will allow the merchant to hand their customers a receipt showing the amount of the transaction along with a tip line. The customer can then fill out the tip line, the total line and hand the receipt and their credit card back to the merchant for payment. This allows the merchant to swipe the card, enter the amount of the transaction as well as the tip amount when prompted during the transaction. Use of this feature is optional, you do not have to print a presale ticket for retail with tip, it simply eliminates having to ask the customer if he/she will be leaving a tip on the card during the transaction.

Transaction types that allow retail with tip are the following:

- Swiped Credit
- Manual Credit
- AVS Credit
- CVV2 Credit
- Debit Sale

EXAMPLE: The customer gets a haircut at the local barber shop. When finished the merchant (the barber) prints out a presale ticket for \$20.00 which is the dollar amount due to for the haircut and hands it to the customer. The customer writes down another \$5.00 on the tip line and writes \$25.00 on the total line then hands it back to the barber with his credit card. When the barber completes the sale he is prompted to enter the amount which is \$20.00 and then prompted to enter the tip amount which he now knows from the Presale Ticket is \$5.00 (he doesn't have to ask the customer if he's leaving a tip).

TRANSACTIONS

PRESALE TICKET

Use the chart below to enable the Inline Tip function. This will allow you to access the Presale Ticket feature.

STEP	ACTION	TOUCH SCREEN DISPLAY
1	Press the MENU icon on your home screen to reach CORE MENU . <i>See diagram></i>	 
2	Press APPLICATIONS in the CORE menu. <i>See diagram></i>	 
3	Press CREDIT/DEBIT/EBT in the APPLICATIONS menu. <i>See diagram></i>	 
4	Press TIPS AND TABS in the CREDIT/DEBIT/EBT menu. <i>See diagram></i>	
5	If prompted, input MANAGER PASSWORD (default password is 1234). Input the RETURN amount and press OK . <i>See diagram></i>

CREDIT CARD RETURN: EMV CHIP CARD

A Credit Card RETURN is the reversal of an approved and settled transaction which will post a credit amount to the customer's credit card. Traditionally a RETURN is processed when the original transaction has already been settled, when the original transaction still resides in the current batch and has not been settled, a VOID may be processed instead to nullify the charge. Use the steps below to complete a RETURN transaction.

EXAMPLE: The customer made a purchase last week and came in today to return the item for credit. The original purchase has already been settled in a previous batch so I processed a RETURN to post the refund back to her credit card.

STEP	ACTION	TOUCH SCREEN DISPLAY
1	Press the CREDIT icon on your terminal home screen. A new screen will appear with the following options: SALE, RETURN, VOID, AUTH, TICKET and BALANCE. <i>See diagram ></i>	
2	Press RETURN icon to reach RETURN entry screen. <i>See diagram ></i>	
3	Enter the RETURN amount using your number keypad. If the amount shown is correct press OK to confirm. <i>See diagram ></i>	
4	Press YES to confirm the return amount. <i>See diagram ></i>

AUTHORIZATION (AUTH ONLY)

An Authorization Only transaction is used to verify funds and obtain an approval code. It is important to note that an Authorization Only does NOT CHARGE the customer's credit card however places a hold for the requested amount on the customer's open-to-buy limit. After an "Auth Only" is processed the approval code is used at a later time to perform a Ticket Only sale transaction to charge the account.

EXAMPLE: To reserve a cabin at Lake Cawanna there is a \$100.00 deposit required at the time of the reservation. The merchant processes an AUTH ONLY transaction for the \$100.00, receiving an authorization code to hold the funds. When the customer completes his/her stay the merchant charges the credit card by processing a TICKET ONLY sale using the authorization number that was previously obtained.

Auth Only: (ALLOWED FOR CREDIT ONLY)

STEP	ACTION	TOUCH SCREEN DISPLAY
1	Press the CREDIT icon on your terminal home screen. A new screen will appear with the following options: SALE, RETURN, VOID, AUTH, TICKET and BALANCE . <i>See diagram ></i>	
2	Press AUTH icon to reach AUTH entry screen. <i>See diagram ></i>	
3	Enter the AUTH amount using your number keypad. If the amount shown is correct press OK to confirm. <i>See diagram ></i>	
4	If prompted, input MANAGER PASSWORD (default password is 1234).	
5	A prompt will appear asking your customer to tap, insert, swipe or enter their card number manually. Choose the appropriate option. <i>See diagram ></i>	
6	The transaction will be processed and will be declined or approved.	
7	The terminal flashes the host response and prints sales receipt. Once completed the terminal will return to idle prompt.	

TRANSACTIONS

Retail Receipt Example: Authorization

IMPORTANT: This is NOT a sale. Authorization only transactions obtain an approval code for the requested amount and that amount is held against the cardholder's open to buy availability. A Ticket Only sale needs to be completed for the merchant to acquire funds for the transaction. Only a merchant copy of the receipt will print for Authorization transactions.

VOIDS

A Void transaction will nullify a transaction only when that transaction resides in the current batch; the transaction amount must be exactly the same as the original transaction amount.

The Dejavo Terminal will check the database for the original transaction. View the If/Then chart (below) for more information.

Support of Void transactions on debit cards will vary by host; it may or may not be allowed, check with your Merchant Services provider for further clarification. You can void the following transaction types: Sale, Return & Ticket Only.

This section will provide the process for:

- Void by CARD # & Amount
- Void Transaction - Find Transaction #

IF	THEN
If the Terminal can match card # and Amount in batch...	The Terminal will process a VOID.
If the Terminal can match the card# but not the dollar amount...	The terminal will then allow you to search by transaction number or view all open transactions with that account number.
If the Terminal does not find card in batch...	The Terminal will display "Card Not Found" and cancel the VOID transaction.

EXAMPLE: The customer purchased a summer dress then brought it back a few hours later because it didn't fit. Since the terminal has not settled and the original transaction resides in the current batch the merchant processed a VOID transaction to nullify the original sale.
